#### SUMMARY OF FINDINGS

#### Seasonally Adjusted

Seasonally adjusted employment in Queensland fell by 16,000 in November 1990, a significant contribution to the Australian decrease of 42,500. The labour force in Queensland fell by 11,700 over the same period.

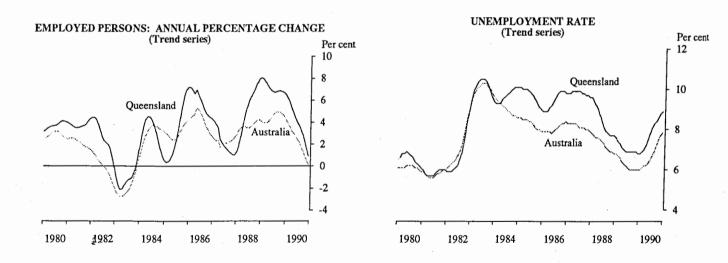

The unemployment rate in Queensland rose 0.4 percentage points to 9.2 per cent in November 1990. This made the unemployment rate for Queensland the highest of any State, which last occurred in January 1988. The seasonally adjusted unemployment rate for Australia rose by 0.6 percentage points to 8.2 per cent in November 1990.

# LABOUR FORCE, QUEENSLAND (Seasonally adjusted series)

Particulars	Unit	November 1989	September 1990	October 1990	November 1990	Annual percentage change
Employed Unemployed Unemployment rate Participation rate Labour force	'000 '000 % %	1,314.7 95.7 6.8 64.0 1,410.4	1,330.1 120.8 8.3 64.3 1,450.8	1,330.5 128.5 8.8 64.6 1,459.0	1,314.5 132.8 9.2 64.0 1,447.3	+ 38.8

#### **Trend Series**

Trend series data charted below show the decline in the rate of growth in employment continued during November 1990. The November 1990 trend series unemployment rate was 8.9 per cent for Queensland (an increase of 2.1 percentage points since November 1989) and 7.9 per cent for Australia (an increase of 3.0 percentage points).

#### Regional Estimates

The unemployment rate for the Brisbane Statisticial Division (BSD) in November 1990 was 8.6 per cent and 7.9 per cent for the Balance of Queensland. There was a slight decline in the participation rate during November 1990, with a 64.6 per cent participation rate in the BSD and 63.0 per cent for the Balance of Queensland.

The South and East BSD Balance which includes Logan City, Redland Shire and parts of Albert and Beaudesert Shires had the highest unemployment rate in the BSD at 10.3 per cent.

Outside the BSD, North and West Moreton region, which includes the area to the north and west of the BSD from Boonah to Noosa, had the highest unemployment rate at 10.7 per cent. Wide Bay-Burnett continued to have the lowest participation rate in the State at 55.0 per cent. This is 15.5 percentage points lower than the participation rate for South and East BSD Balance.

#### SUMMARY OF FINDINGS - continued

#### **Youth Estimates**

The number of 15 to 19 year olds in the Queensland labour force fell by 2,600 to 154,600 persons in November 1990, while employment decreased slightly. The unemployment rate decreased slightly from 18.9 per cent in October 1990 to 18.3 per cent in November 1990 for this group.

The number of 20 to 24 year olds in the labour force increased marginally to 197,900 persons in November 1990. Employment in this age group increased slightly, while the unemployment rate decreased slightly from 11.6 per cent in October 1990 to 11.3 per cent in November 1990.

#### **Employment and Unemployment Change for Selected Groups**

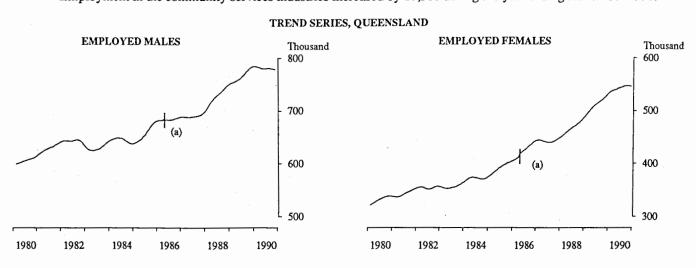

The summary table below shows, for various groups in Queensland, the change in employment and unemployment in the year to November 1990.

	Emplo ('000		Annual	Unempl ('000		Annual percentage
Particulars	November 1989	November 1990	percentage - change	November 1989	November 1990	percentage change
Males Females Married females	784.5 538.8 325.9	772.4 550.8 342.3	- 1.5 + 2.2 + 5.0	44.6 40.9 17.3	72.5 46.2 18.5	+ 62.6 + 13.0 + 6.9

Full-time workers Part-time workers	1,030.1 293.1	1,023.2 299.9	- 0.7 + 2.3			
Looking for full-time work Looking for part-time work				66.1 19.3	95.7 23.0	+ 44.8 + 19.2
Selected industries Manufacturing Construction Wholesale and retail trade Community services Recreation, personal and other services	164.2 116.7 294.8 219.5	153.9 106.0 302.1 237.0	- 6.3 - 9.2 + 2.5 + 7.4	9.8 6.2 12.5 4.0	12.6 11.2 19.7 6.3 8.1	+ 28.6 + 80.6 + 57.6 + 57.5
Brisbane Statistical Division Balance of Queensland	619.7 703.6	611.4 711.8	- 1.3 + 1.2	36.1 49.4	57.8 61.0	+ 60.1 + 23.5
Queensland	1,323.3	1,323.2	_	85.5	118.7	+ 38.8

Unemployment within many of the groups listed increased significantly, resulting in a total increase for Queensland of 33,200. The total number of employed persons in Queensland decreased only slightly although significant changes occurred within some groups.

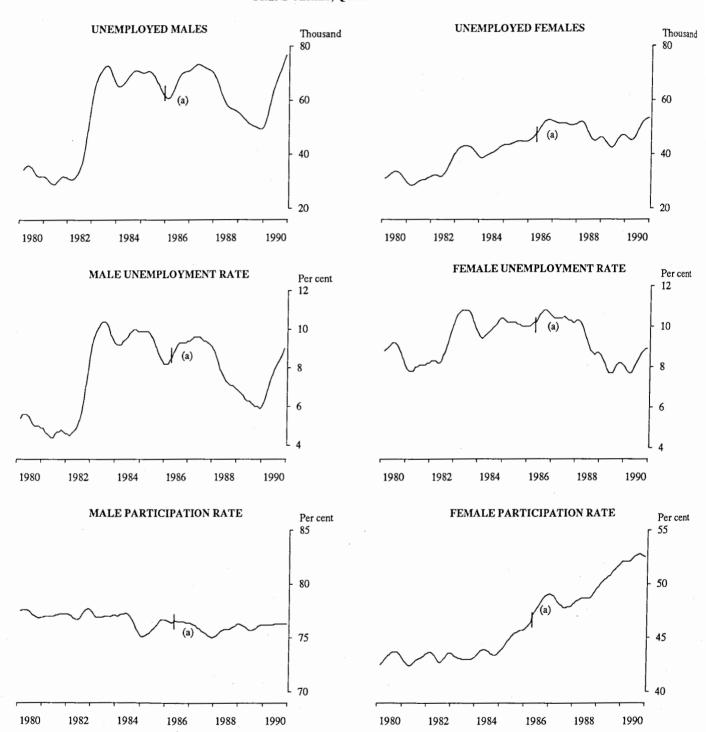

Employment in the construction industry decreased by 10,700 during the year to November 1990. Employment in manufacturing industries and recreation, personal and other services industries also decreased by 10,300 and 9,300, respectively.

Employment in the community services industries increased by 17,500 during the year ending November 1990.

#### SUMMARY OF FINDINGS - continued

#### TREND SERIES, QUEENSLAND - continued

(a) Indicates break in series. Prior to April 1986 unpaid family helpers who worked 1 to 14 hours a week were defined as unemployed or not in the labour force. From April 1986 they were defined as employed persons.

#### **NOTES**

This publication contains estimates of the civilian labour force, including estimates for Queensland regions, derived from the labour force survey part of the monthly population survey.

Explanatory Notes are located at the back of this publication.

#### **GLOSSARY**

Attending school. Persons aged 15 to 19 years who, during the reference week, were enrolled full-time at secondary or high schools.

Attending tertiary educational institution full-time. Persons aged 15 to 24 years who, during the reference week, were enrolled full-time at universities, colleges of advanced education, technical colleges, colleges of technical and further education and theological colleges.

Average hours worked. Aggregate hours worked by a group divided by the number of persons in that group.

Average duration of unemployment. For a group of unemployed persons, the aggregate duration of unemployment divided by the number of persons in the group.

Dependants. All family members under 15 years of age, all family members aged 15 to 19 years attending school and all family members aged 15 to 24 years attending a tertiary educational institution full-time.

Duration of unemployment. The period from the time a person began looking for work or was stood down, to the end of the reference week. Thus the survey measures current (and continuing) periods of unemployment rather than completed spells. For persons who may have begun looking for work while still employed, the duration of unemployment is defined as the period from the time the person last worked full-time for 2 weeks or more to the end of the reference week.

Employed. Persons aged 15 years and over who, during the reference week:

- (a) worked for 1 hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (comprising employees, employers and self-employed persons);
- (b) worked for 1 hour or more without pay in a family business or on a farm (i.e. unpaid family helpers);
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than 4 weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than 4 weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study or
- (d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.

Family. Two or more related persons (including relationships by blood, marriage or adoption) usually resident in the same household at the time of the survey. A family comprises a married couple or a family head as defined, together with any persons having any of the following relationships to them:

- (a) sons or daughters of any age, if not married and with no children of their own present;
- other relatives if not accompanied by a spouse, sons or daughters, or parents of their own or
- (c) any children under 15 years of age who do not have a parent present.

Family head. The parent in the case of a one-parent family or in the case of other groups of related persons, generally defined to be the eldest person in the family. No family head is defined for a married-couple family.

Former workers. Unemployed persons who have previously worked full-time for 2 weeks or more but not in the past 2 years.

Full-time workers. Employed persons who usually worked 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

Hours worked. The total number of hours a group of employed persons has actually worked during the reference week, not necessarily hours paid for.

Job leavers. Unemployed persons who have worked full-time for 2 weeks or more in the past 2 years and left that job voluntarily, that is, because of unsatisfactory work arrangements, pay or hours; the job was seasonal, temporary or a holiday job and they left that job to return to studies; their last job was running their own business and they closed down or sold that business for reasons other than financial difficulties or any other reasons.

Job losers. Unemployed persons who have worked fultime for 2 weeks or more in the past 2 years and left that job involuntarily, that is, were laid off or retrenched from that job; left that job because of their own ill-health or injury; the job was seasonal or temporary and they did not leave that job to return to studies or their last job was running their own business and the business closed down because of financial difficulties.

Industry. Classified according to the Australian Standard Industrial Classification (ASIC), 1983 (Catalogue Nos 1201.0 and 1202.0).

Labour force. For any group, persons who were employed or unemployed, as defined.

Labour force status. A classification of the civilian population aged 15 years and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.

Marital status. Persons are classified as married (husband and wife) if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey. The not married category comprises persons who have never married, or are separated, widowed or divorced, as well as those who, although reported as being married, did not have a spouse who usually lived in the household.

#### GLOSSARY - continued

Median duration of unemployment. The duration which divides unemployed persons into two equal groups, one comprising persons whose duration of unemployment is above the median and the other, persons whose duration is below it.

Not a member of a family. A person who is not related to any other member of the household in which they are living.

Not in the labour force. Persons who were not in the categories employed or unemployed, as defined. They include persons who were keeping house (unpaid), retired, voluntarily inactive, permanently unable to work, persons in institutions (hospitals, gaols, sanatoriums etc.), trainee teachers, members of contemplative religious orders and persons whose only activity during the reference week was jury service or unpaid voluntary work for a charitable organisation.

Occupation. Classified according to the Australian Standard Classification of Occupations (ASCO), 1986 (Catalogue No. 1222.0).

Other families. One-parent families and families in which there is no parent, for example a family head living with a brother or sister.

Participation rate. For any group, the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group. Participation rates for persons classified by birthplace are calculated using population estimates which exclude those in institutions. Participation rates for persons classified by school or tertiary educational institution attendance are calculated using population estimates which include those in institutions.

Part-time workers. Employed persons who usually worked less than 35 hours a week and who did so during the reference week.

Seasonally adjusted series. A time series of estimates with the estimated effects of normal seasonal variation removed. See paragraph 21 of the Explanatory Notes for more detail.

Statistical regions. Classified according to the Australian Standard Geographical Classification (ASGC), Edition 8.

Status of worker. Employed persons classified by whether they were employers, self-employed persons, wage and salary earners (employees), or unpaid family helpers.

*Trend series.* A smoothed seasonally adjusted series of estimates. See paragraphs 22 and 23 of the Explanatory Notes for more detail.

*Unemployed*. Persons aged 15 years and over who were not employed during the reference week and:

- (a) had actively looked for full-time or part-time work at any time in the 4 weeks up to the end of the reference week and:
  - (i) were available for work in the reference week or would have been available except for temporary illness (i.e. lasting for less than 4 weeks to the end of the reference week) or
  - (ii) were waiting to start a new job within 4 weeks from the end of the reference week and would have started in the reference week if the job had been available then or
- (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than 4 weeks up to the end of the reference week (including the whole of the reference week) for reasons others than bad weather or plant breakdown.

Unemployed persons classified by industry and occupation. Unemployed persons who had worked full-time for 2 weeks or more in the last 2 years are classified according to the industry and occupation of their most recent full-time job.

Unemployed looking for full-time work. Unemployed persons who actively looked for full-time work or were to resume a full-time job, from which they had been stood down.

*Unemployed looking for part-time work.* Unemployed persons who had actively looked for part-time work only or were to resume a part-time job, from which they had been stood down.

*Unemployment rate.* For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.

#### **EXPLANATORY NOTES**

#### The Population Survey

The survey is based on a multi-stage area sample of private dwellings and non-private dwellings (hotels, motels etc.) and usually covers slightly more than three-fifths of 1 per cent of the population of Queensland. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during a period of 2 weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

#### Scope

- 2. The labour force survey includes all persons aged 15 years and over except:
  - (a) members of the permanent defence forces;
  - (b) certain diplomatic personnel of overseas governments, customarily excluded from Census and estimated populations;
  - (c) overseas residents in Australia and
  - (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

#### Coverage

- 3. In the labour force survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling, and hence has only one chance of selection. The coverage rules are, necessarily, a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the one survey is considered to be negligible. See paragraphs 25 to 27 for information about the effect of the coverage rules on family statistics.
- 4. Persons who are away overseas from their usual residence for less than 6 weeks at the time of interview are generally enumerated at their usual residence when relevant information can be obtained from other usual residents present at the time of the survey. Persons who, at the time of interview, are overseas for 6 weeks or more but for less than 12 months are included in the estimates on the assumption that their labour force characteristics are similar to those of the persons responding in the survey.

#### Supplementary and Special Surveys

5. Emphasis in the population survey is placed on the regular collection of specific data on demographic and labour force characteristics of the population. However, supplementary and special surveys of particular aspects of the labour force or of other subjects are carried out from time to time. Statistics from these surveys are published and are available on request. A list of survey publications on labour force and related topics is shown on page 37.

6. Summary tables from supplementary surveys released since the previous issue of this publication are included from page 26.

#### **Population Benchmarks**

- Labour force survey estimates of persons employed, unemployed and not in the labour force are calculated in such a way as to add up to the independently estimated distribution of the population aged 15 years and over by age and sex. This procedure compensates for under-enumeration in the survey, and leads to more reliable estimates. The independent population statistics (benchmarks) are the latest available estimates at the time the labour force survey is conducted, but they usually differ from the official population estimates subsequently publication published the ABS Australian in Demographic Statistics Quarterly (Catalogue No. 3101.0) because they are necessarily derived from incomplete information about population changes.
- 8. Since regular estimates of the population are not available at the regional level, the State benchmarks were used to produce regional estimates. This methodology assumes a common pattern of under-enumeration at the regional level and also ensures that regional estimates add to the State totals.
- 9. While this procedure can be expected to provide reliable estimates of unemployment and participation rates, it cannot be taken as completely reliable for estimates of numbers involved. For this reason estimates of numbers in each region have not been added to provide an estimate of the total civilian population aged 15 years and over.

#### **Revision of Series**

- 10. Survey estimates are not revised for the usually small amendments of population benchmarks arising from new data on deaths and overseas and internal migration. Revisions are made, however, after each census of population and housing, and when population estimation bases are reviewed. These revisions affect unadjusted, seasonally adjusted and trend estimates. The last such revision was made in February 1989 to take account of the results of the 1986 Census of Population and Housing. This affected all the monthly estimates from January 1984 to January 1989.
- 11. From September 1987, regional estimates were based on statistical regions. Prior to September 1987, estimates were based on differently composed dissemination regions.

#### **EXPLANATORY NOTES - continued**

#### Revision of Series - continued

- 12. The estimates shown in this publication are based entirely on place of usual residence. Prior to October 1982, the estimates are based on a combination of place of enumeration and place of usual residence.
- 13. Until February 1978, surveys were conducted in February, May, August and November each year from 1964. From February 1978 the survey has been conducted on a monthly basis.
- 14. The questionnaire used in the survey for the collection of labour force data has been revised a number of times. Details of these changes have been published in Information Paper: *Questionnaires Used in the Labour Force Survey* (Catalogue No. 6232.0) in March 1978, December 1981, August 1984 and June 1986.

#### Comparability of Series

- 15. As noted in paragraph 10, estimates from January 1984 have been revised to conform to revised population estimates following the 1986 Census of Population and Housing, and are thus not strictly comparable with estimates for periods prior to January 1984 which have not been revised.
- 16. Regional estimates were based on statistical regions from September 1987. They are not comparable to estimates prior to that date which were based on differently composed dissemination regions.
- 17. Comparability with estimates produced from the quarterly survey of employment and earnings is affected by the use of a different survey methodology and definitions. The labour force survey provides estimates of people in jobs whereas the survey of employment and earnings provides an estimate of the number of jobs held by wage and salary earners. A more detailed description of the differences between these two series is provided in Information Paper: Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings (Catalogue No. 6263.0).

#### Reliability of Estimates

- Estimates in this publication are subject to two sources of error.
  - (a) Sampling error. Since the estimates are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, may differ from the figures that would have been produced if all dwellings had been included in the survey. More information on this topic is given in the Technical Notes.

(b) Non-sampling error. Inaccuracies may occur because of imperfections in reporting by respondents and interviewers and errors made in coding and processing data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

#### Survey Sample Redesign

- 19. The Labour Force Survey sample has been redesigned and reselected using information collected in the 1986 Census of Population and Housing. The new sample was phased in over the period September to December 1987. For details, see Information Paper: Labour Force Survey Sample Design (Catalogue No. 6269.0).
- 20. The sampling fraction differs for States and Territories to enable estimates of reasonable accuracy to be produced at State level as well as for Australia. The sampling fraction for Queensland is 1 in 160.

#### Seasonal Adjustment

21. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effect of other influences on the series can be more clearly recognised. Seasonal adjustment does not remove the irregular or non-seasonal influences which may be present in any particular month. Influences that are volatile can still make it difficult to interpret the movement of the series even after adjustment for seasonal variation. Seasonal factors are reviewed annually to take account of each additional year of original data.

#### **Trend Estimation**

- 22. Smoothed seasonally adjusted series produce a measure of trend by reducing the impact of the irregular component of the series. The trend estimates are derived by applying a 13 term Henderson-weighted moving average to the respective seasonally adjusted series. These trend series are used to analyse the underlying behaviour of the series over time.
- 23. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller and after 3 months have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors.

### **EXPLANATORY NOTES - continued**

#### Month-to-month Movements

24. Care should be taken in the interpretation of month-to-month movements in labour force survey estimates as they are subject to sampling and non-sampling variability as explained in paragraph 18.

# Family Labour Force Status and Other Characteristics

- 25. As a part of survey procedures, family relationships are determined each month, enabling both the estimation of persons cross-classified by their family status and the estimation of families.
- 26. Because of the coverage rules of the population survey which associate persons with particular dwellings so that each person has an equal chance of selection in the survey, persons who usually live with other members of their family may, at the time of the survey, be enumerated as not living with all the usual members of their family. This situation is more likely for persons who are enumerated as visitors to other private dwellings or as persons staying in non-private dwellings (hotels, caravan parks, hospitals etc.). The determination of family structure and family characteristics in such cases is most difficult. Thus, family information was not obtained for the following persons:
  - (a) all persons enumerated in non-private dwellings (including hotels, motels, hospitals and other institutions) and
  - (b) persons enumerated as visitors to (rather than usual residents of) private dwellings.
- 27. In addition, in those private dwellings where it was not possible to obtain information relating to all the usual residents, no family information was recorded. Thus the family characteristics of persons living in families which include a member of the permanent defence forces, who is outside the scope of the population survey, are not determined because family information could not be obtained from each usual resident. Similarly, families which at the time of the survey have one or more of their members away from the usual residence, are also excluded from family determination. A summary of those persons for whom family information was obtained, as well as those usual residents of private dwellings for whom complete family information could not be obtained, and those persons specifically excluded from the family determination procedures is contained in Table 12. Generally, family status is determined for more than 90 per cent of all civilians aged 15 years and over.

#### **Related Publications**

28. Users may also wish to refer to the following publications which are available on request:

- The Labour Force, Australia, Preliminary (6202.0) Monthly (\$8.50)

- 29. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products* (Catalogue No. 1101.0). A *Publications Advice* (Catalogue No. 1105.0) is issued on Tuesdays and Fridays which lists publications to be released in the next few days. These publications are available from any ABS Office.

#### **Unpublished Statistics**

- 30. The ABS can also make available unpublished labour force data on floppy disk, microfiche, photocopy, computer printout or clerically extracted tabulation. Generally, a charge is made for providing unpublished statistics.
- 31. For further information contact Bevin Morris by telephoning Brisbane (07) 222 6029, or write to Information Services at the Australian Bureau of Statistics, GPO Box 9817, Brisbane Q 4001.

#### Symbols and Other Usages

- Not applicable.
- \* Subject to sampling variability too high for most practical uses. (See Technical Notes, paragraphs 8 and 9 regarding reliability of the estimates.)
- Nil or less than half the final digit shown.
- 32. Where figures have been rounded, discrepancies may occur between sums of the component items and totals.

#### TECHNICAL NOTES

#### **Estimation Procedure**

The labour force estimates are derived from the monthly population survey by use of a complex ratio estimation procedure, which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself. This procedure compensates for under-enumeration in the survey and leads to more reliable estimates.

2. Since regular estimates of the population are not available at the regional level, the State benchmarks were used to produce regional estimates. This methodology assumes a common pattern of under-enumeration at the regional level and also ensures that regional estimates add to the State totals.

#### **Data Quality**

3. Two types of error are possible in an estimate based on a sample survey: sampling error and non-sampling error. *Non-sampling error* is explained in the Explanatory Notes, paragraph 18(b). The *sampling error* is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed.

#### Standard error of estimates

- 4. One measure of the variability of estimates which occurs as a result of surveying only a sample of the population is the *standard error* (SE).
- 5. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included and about 19 chances in 20 that the difference will be less than two standard errors.
- 6. The standard error of an estimate can be obtained from Table A. Linear interpolation should be used to calculate the standard error of estimates falling between the sizes of estimates listed in the table (see example following Table A).
- 7. Standard errors for some estimates, e.g. unemployment, can vary from those shown in the tables.

Methods for calculating the standard errors of these estimates are shown in the table below.

#### Relative standard error

- 8. Another measure of sampling variability is the relative standard error (RSE). This is obtained by expressing the standard error as a percentage of the estimate to which it refers. The relative standard error is a useful measure in that it provides an immediate indication of the percentage errors likely to have occurred due to sampling, and thus avoids the need to refer also to the size of the estimate.
- 9. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. \*3.0) to indicate they are subject to high standard errors and should be used with caution. Small estimates are subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable use.

#### Standard error of movement

- 10. The movement in the level of an estimate is also subject to sampling variability. The standard error of the movement depends on the levels of the estimates from which the movement is obtained rather than the size of the movement. Standard errors of monthly movements are given in Table B. These estimates apply only to estimates of movements between two consecutive months.
- 11. Movements between corresponding months of consecutive quarters i.e. quarterly movements, can be obtained by multiplying the figure in Table B by 1.22. Standard errors of movements between corresponding months of consecutive years, i.e. annual movements, can be obtained by multiplying the figures in Table A by 1.3. When using Tables A or B to calculate standard errors of movements, refer to the larger of the two estimates from which the movement is derived.

#### METHODS FOR CALCULATING THE STANDARD ERRORS FOR SELECTED ESTIMATES

#### Measure of reliability to be determined

Standard errors of estimates of employed persons.
Standard errors of estimates of unemployed persons.
Standard errors of estimates of persons not in the labour force.
Standard errors of rates (e.g. the unemployment rate which is based on the number of unemployed persons expressed as a percentage of the number of persons in the labour force).

Standard error of average hours worked.

Standard error of median duration of unemployment.

Standard error of monthly movements. Standard error of quarterly movements.

Standard error of annual movements.

#### Method

Determine the SE from Table A directly.

Multiply the SE from Table A by 0.97.

Multiply the SE from Table A by 1.06.

Determine the RSE of the numerator (x) and the denominator (y) then apply the following formula.

RSE  $(x/y) = \sqrt{[RSE(x)]^2 - [RSE(y)]^2}$ 

Determine the RSE for the number of persons on which the average is based and multiply this by 0.7.

Determine the RSE for the number of persons on which the median is based and multiply this by 2.0.

Using Table B, look up the SE of the larger estimate.

Determine the standard error of the larger estimate (using Table A) and multiply this by 1.22.

Determine the standard error of the larger estimate (using Table A) and multiply this by 1.3.

#### **TECHNICAL NOTES - continued**

#### Linear Interpolation

12. Linear interpolation is used to determine the standard error of an estimate which falls between two values listed in the *size of estimate* column in Tables A or B. Linear interpolation is best described using an example. In November 1990 there were  $550,800~(X_e)$  employed females in Queensland. This estimate falls between the values  $500,000~(X_l)$  and  $1,000,000~(X_u)$  in Table A.

13. The standard error of the estimate is determined as follows:

Firstly calculate  $F = \frac{X_e - X_1}{X_u - X_1}$ 

 $= \underline{550,800 - 500,000}$  1,000,000 - 500,000

2,600

200,000

= 0.1016

Secondly, calculate the standard error of the estimate,  $SE(X_c)$  thus,

 $SE(X_e)$  =  $SE(X_l) + F[SE(X_u) - SE(X_l)]$ 

 $= 6,300 + 0.1016 \times [8,100 - 6,300]$ 

= 6,483

= 6,500 rounding to the nearest 100.

Therefore the standard error of the number of employed females in Queensland in November 1990 (550,800) is 6,500.

#### APPENDIX

## SUPPLEMENTARY AND SPECIAL SURVEYS RELATING TO THE LABOUR FORCE

Although emphasis in the population survey is placed on the regular collection of data on demographic and labour force characteristics, supplementary and special surveys of particular aspects of the labour force are carried out from time to time. The results of these surveys on labour force and related topics are published separately as shown below.

Title of Publication Cate	alogue No.
Alternative Working Arrangements, Australia - Latest issue: September to November 1986	6341.0
Annual and Long Service Leave Taken, Australia - Latest issue: May 1988 to April 1989	6317.0
Career Paths of Persons With Trade Qualifications, Australia, 1989	6243.0
Career Paths of Qualified Nurses, Australia, March to July 1989	6277.0
Child Care Arrangements - Latest issue: June 1987	4402.0
Employment Benefits, Annual - Latest issue: August 1990	6334.0
How Workers Get Their Training, Australia, 1989	6278.0
Income Distribution Survey, Australia, Persons with Earned Income, 1986	6546.0
Job Search Experience of Unemployed Persons, Australia, Two-yearly - Latest issue: July 1988	6222.0
Labour Force Experience, Annual - Latest issue: March 1990	6206.0
Labour Force Status and Educational Attainment, Australia, Annual - Latest issue: February 1990	6235.0
Labour Force Status and Educational Attendance (Persons Aged 15 to 24), Annual - Latest issue: September 1989	6272.0
Labour Force Status and Other Characteristics of Families, Annual - Latest issue: June 1990	6224.0
Labour Force Status and Other Characteristics of Migrants, Australia, March 1987 (previously: Characteristics of Migrants Aged 18 Years and Over at Time of Arrival and Who Arrived after 1960)	6250.0
Labour Mobility, Annual - Latest issue: February 1990	6209.0
Multiple Jobholding, Two-yearly - Latest issue: August 1987	6216.0
Persons Employed at Home, Australia, April 1989	6275.0
Persons Who Intended to Retire from Full-time Work, Australia, September 1984	6258.0
Persons Not in the Labour Force, Australia, Twice-yearly - Latest issue: September 1989	6220.0
Persons Who Had Re-entered the Labour Force, Australia - Latest issue: May 1990	6264.0
Persons Who Have Left the Labour Force, Australia - Latest issue: April 1988	6267.0
Retirement and Retirement Intentions, Australia, Latest issue, November 1989	6238.0
Successful and Unsuccessful Job Search Experience, June 1986 (previously: Methods of Obtaining Jobs)	6245.0
Superannuation, Australia - Latest issue: November 1988	6319.0
Trade Union Members - Latest issue: August 1990	6325.0
Transition From Education to Work, Annual - Latest issue: May 1990	6227.0
Underemployed Workers, Australia - Latest Issue: May 1988	6265.0
Weekly Earnings of Employees (Distribution), Annual - Latest issue: August 1990	6310.0

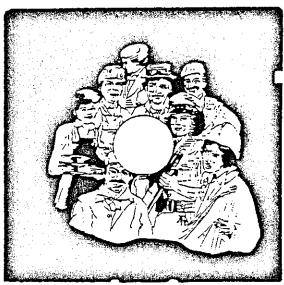

Special tabulations of data from these surveys are available. Please contact Rick Lennon (Brisbane (07) 222 6044) for further information.

#### **CUSTOMISED REPORTS**

Summary reports at the national, State and regional level can be prepared for any aspect of the labour force required, or on any aspect of employment, earnings or industrial conditions. Please contact Rick Lennon on (07) 222 6044 for details, or write to Labour Section, Australian Bureau of Statistics, GPO Box 9817, Brisbane Q 4001.

#### \* LABOUR FORCE SURVEY DATA \*

The ABS offers an extensive range of labour force data on floppy disk

Three services are available:

- Monthly data published in The Labour Force, Australia, Preliminary (6202.0) are available, as a subscriber service, on floppy disk (6271.0). The disks contain the most recent 15 months data for every series in the publication.
- Annual revisions to seasonally adjusted and trend data can be obtained on floppy disk in March each year.
- Ad hoc requests for labour force time series, extending back to February 1978, can be serviced on floppy disk. This service covers thousands of series available in the ABS publications The Labour Force, Australia, Preliminary (6202.0) and The Labour Force, Australia, (6203.0), as well as a range of unpublished data.

For more information contact Rick Lennon on Brisbane (07) 222 6044.

## \* LABOUR FORCE STATUS AND OTHER CHARACTERISTICS OF FAMILIES, JUNE 1990 \*

This recently released publication, using data from the June 1990 Labour Force Survey, provides information about the labour force status of Australian families, as well as selected social characteristics of these families.

The publication features information on:

- family type (i.e. married-couple, one parent and number of dependent children)
- family size and age of family members
- number of employed and unemployed family members
- birthplace of the family head/husband/wife and duration of unemployment
- · family status including details of full time/part time workers and weekly hours worked
- persons not considered to be members of a family, for instance whether or not they were living alone.

For further information on available data please contact Rick Lennon on Brisbane (07) 222 6044. To order your copy of Labour Force Status and Other Characteristics of Families, Australia, June 1990 (6224.0) complete the order form at the end of this publication.
